

Supporting Evidence-Based Policy to Strengthen Social Protection Programs

Lina Marliani

Executive Director, J-PAL SEA

18 February 2020

J-PAL's mission is to reduce poverty by ensuring that policy is informed by scientific evidence

We have 7 regional offices at universities around the world. Our network has 900+ completed and ongoing evaluations in 75+ countries and 9 sectors

J-PAL in Southeast Asia

- J-PAL SEA launched in 2013; keynote by H.E. Susilo Bambang Yudhoyono
- Led by two Scientific Directors: Professors Ben Olken (MIT) and Rema Hanna (Harvard)
- Based at the Faculty of Economics and Business, Universitas Indonesia (FEB UI)
- Core funding support from the Australian Government

Australian Government

How we promote the use of evidence to inform decision making

Process of Informing Evidence

Building long-term relationship with partners to identify priority needs

Developing policy relevant and high quality research

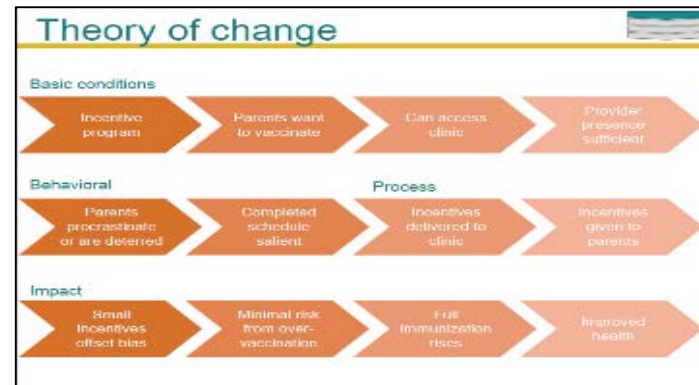

1. **Build long-term partnership** to identify local policy needs

2. **Matchmaking process** to establish mutually-aligned interests between academics and partners

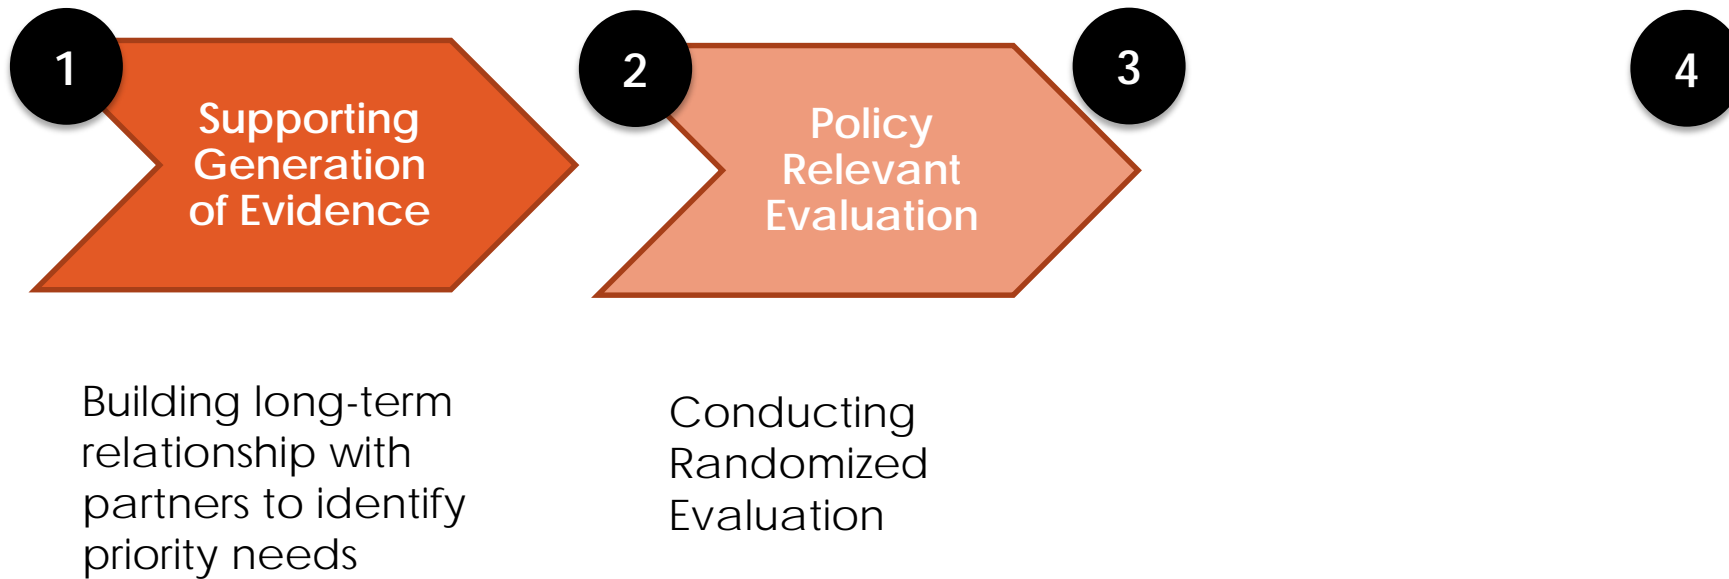

3. **A theory-driven** approach to increase rigor

How we promote the use of evidence to inform decision making

Process of Informing Evidence

Conducting randomized evaluation to generate evidence for effective policies

Because of the randomization, the two groups are *statistically equivalent* at the beginning of the study.

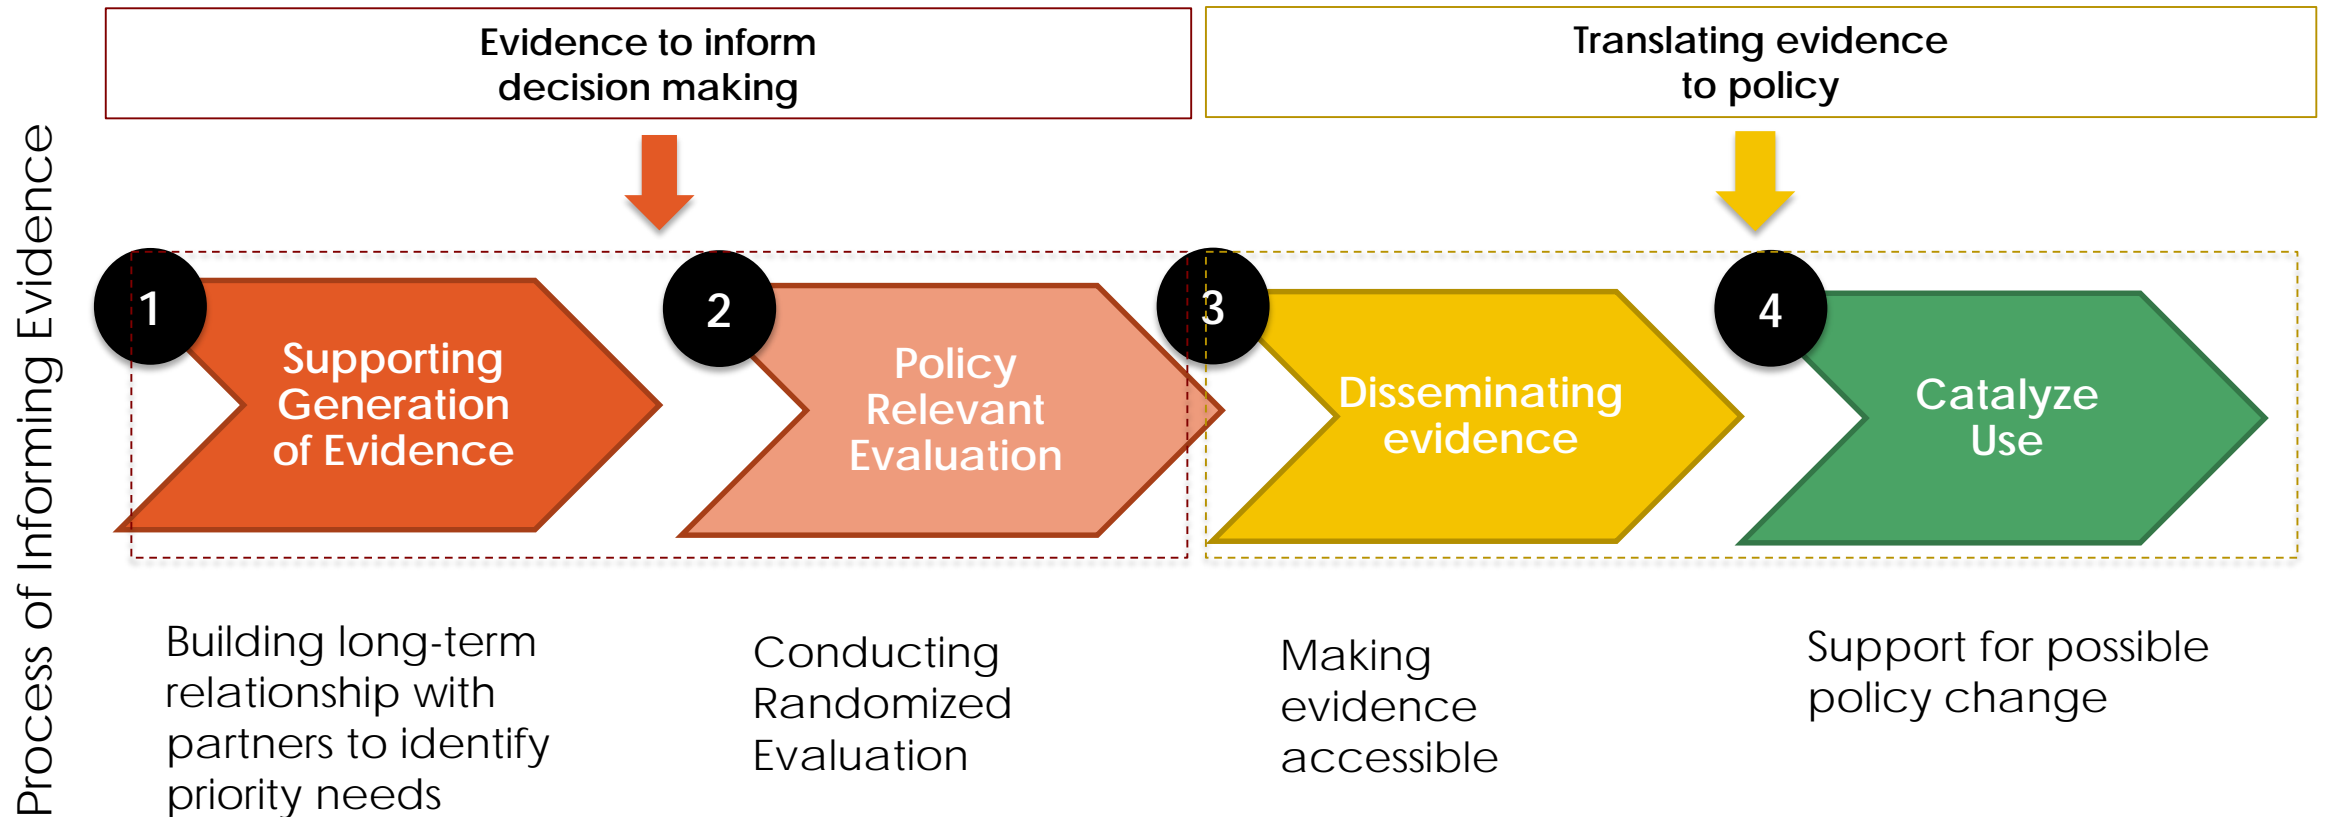

Treatment group

Comparison group

When we compare the outcomes of the two groups after the intervention, **any differences between the two groups can be attributed to the program**, and not other factors, such as regional differences.

How we promote the use of evidence to inform decision making

Making evidence accessible and supporting windows of policy change

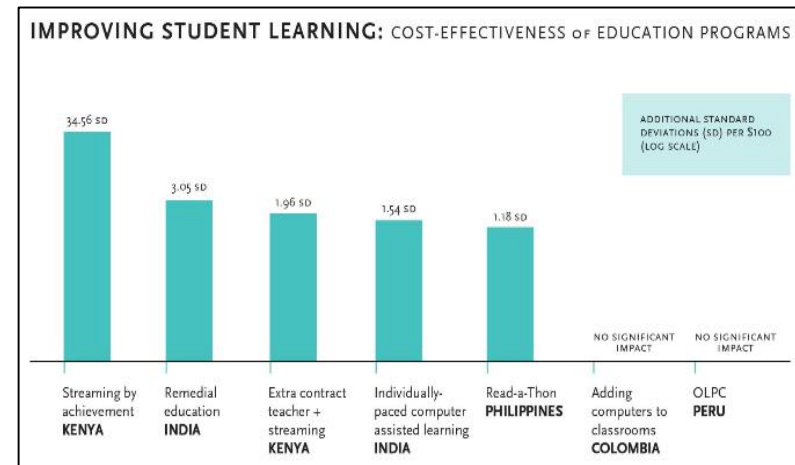

Policy conferences and workshops to disseminate findings for the wider public

One-on-one meetings with partners/policymakers to share evidence and offer support to catalyze use

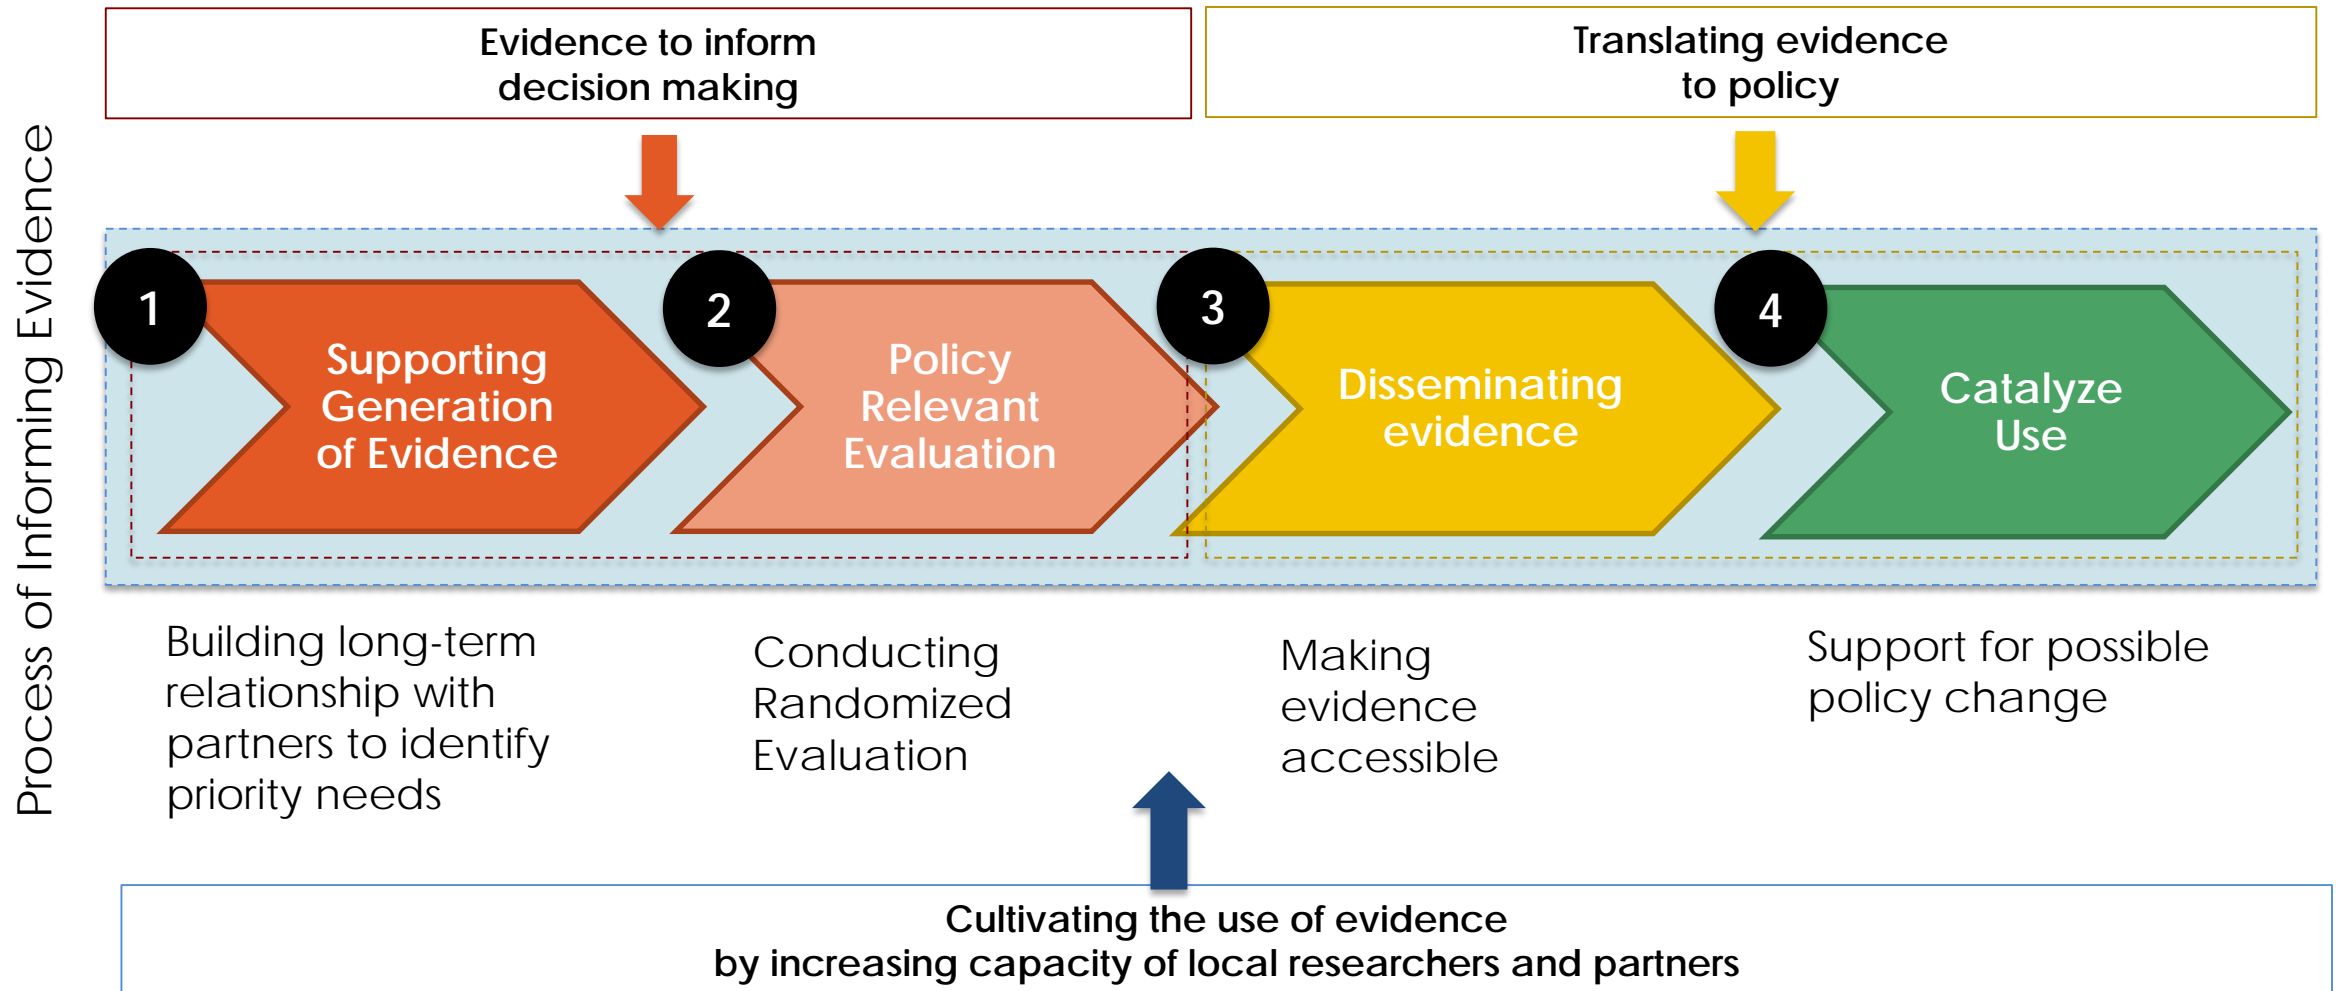

Policy lessons summarized in a J-PAL Briefcase

Cost Effective Analysis

How we promote the use of evidence to inform decision making

Increasing local capacity to use, design, and implement high-quality impact evaluations

In-person training

J-PAL <i>Evaluating Social Programs</i>	Annual trainings opened for local professors, donors, government and partner organizations
Collaboration on evaluations	<ul style="list-style-type: none">• Increasing capacity of local researchers and research organizations in conducting REs• Customized training to better fit partner's policy priorities
Internal Capacity	Hiring senior fellows / post docs and building capacity of staff

Online training

J-PAL Online Courses (free)	<ul style="list-style-type: none">• JPAL 101x: Evaluating Social Programs• JPAL 350x: Measuring Health Outcomes in Field Surveys• Micromasters J-PAL x MIT

Future Dates To Be Announced

Enroll Now

I would like to receive email from Massachusetts Institute of Technology and learn about other offerings related to Evaluating Social Programs.

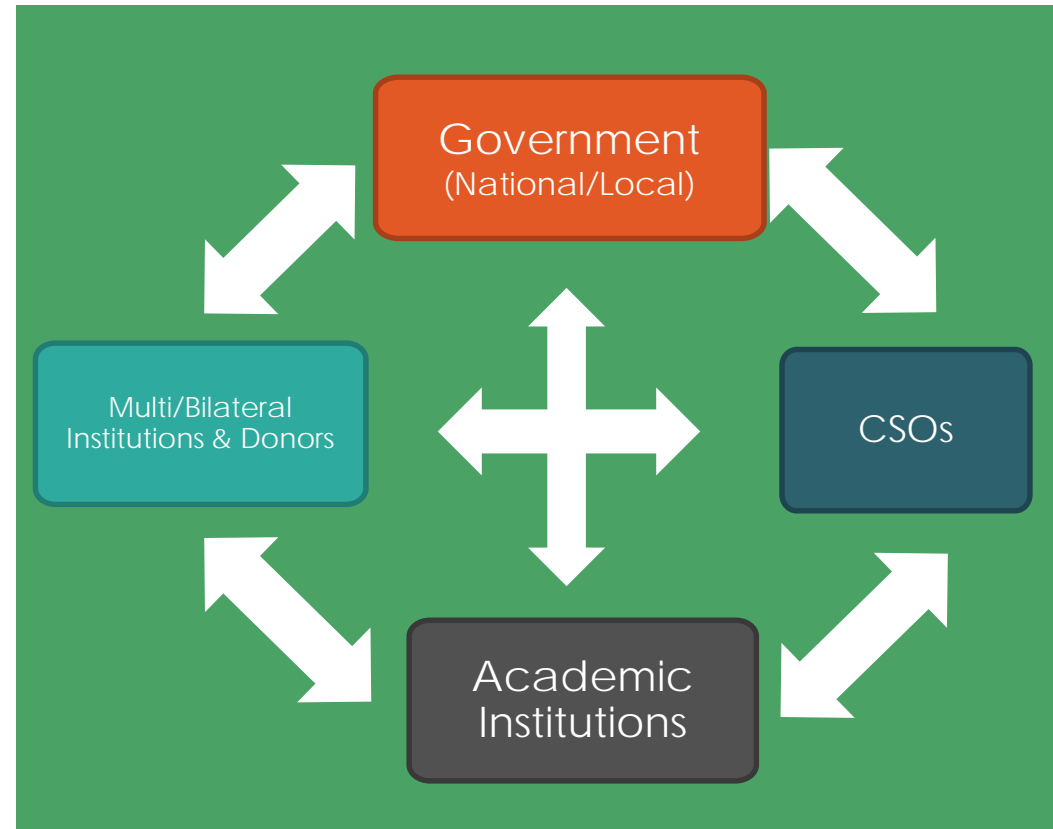

About this course 17 Reviews 3.5 / 5 ★★★★★

Learn why evaluations matter and how they can be used to rigorously measure the social impact of development programs. This practical course will provide a thorough understanding of randomized evaluations, with pragmatic step-by-step training for conducting one's own evaluation. Through a combination of lectures and case studies from real randomized evaluations, the course will focus on the benefits and methods of randomization, choosing an appropriate sample size, and common threats and pitfalls to the validity of an experiment. While the course is centered around the why, how, and when of randomized evaluations, it will also impart insights on the importance of a needs assessment, measuring outcomes effectively, quality control, and monitoring methods that are useful

Length: 5 weeks
Effort: 4 hours per week
Price: FREE
Verified Certificate option closed
Institution: MITx
Subject: Economics & Finance

Throughout the process of informing policy, we closely collaborate with different stakeholders

Contribution from the supporting roles of different stakeholders, including government partners and policymakers, donor agencies, development organizations and academics

Case Study:
Informing Raskin Reform

Case Study: Informing Raskin Reform

Informing the government to improve Indonesia's biggest food subsidy program, Rice for the Poor (Raskin)

The program encountered high leakage and poor service delivery, where:

Only 1/3 of subsidy are received by beneficiaries

Beneficiaries have been paying their rice at 42% above official price

As a possible solution, the GoI launched the Raskin ID Card –
a card to help inform beneficiaries of their entitlement and
address the above challenges

Biggest food subsidy: Established in 1998, Raskin distributes rice to 30% poorest households. The budget for Raskin in 2012 was US\$1.5 billion and the government distributed subsidized rice to 17.5 million people

Case Study: Informing Raskin Reform

In 2013, we conducted a randomized evaluation to study the impact of *Raskin ID Card* in reducing program leakage

“Are Raskin ID cards effective to increase take-up of program subsidies and reduce price of rice that beneficiaries are able to purchase?”

[Banerjee et al, 2018](#)

Conducted in 572 villages in six different regencies:

- Pematang & Wonogiri (East Java)
- Palembang dan Ogan Komering Ilir (South Sumatera)
- Bandar Lampung dan Lampung Tengah (Lampung)

Key partners: National Acceleration Team for Poverty Reduction (TNP2K), Ministry of National Development Planning (Bappenas)

Case Study: Informing Raskin Reform

Findings from the evaluation revealed that Raskin ID Card was effective to reduce program leakage:

Beneficiaries received more subsidies by **26%**

Beneficiaries were able to pay **2.5%** less for every kg of rice

An overall reduction of program leakage by 33%-58%

[Banerjee et al, 2018](#)

Case Study: Informing Raskin Reform

After learning about the results of the evaluation, the GoI scaled-up the Raskin ID card in 2014

Reaching:

15.5 million households

OR

65.5 million individuals

...and achieving improvement in cost efficiency:

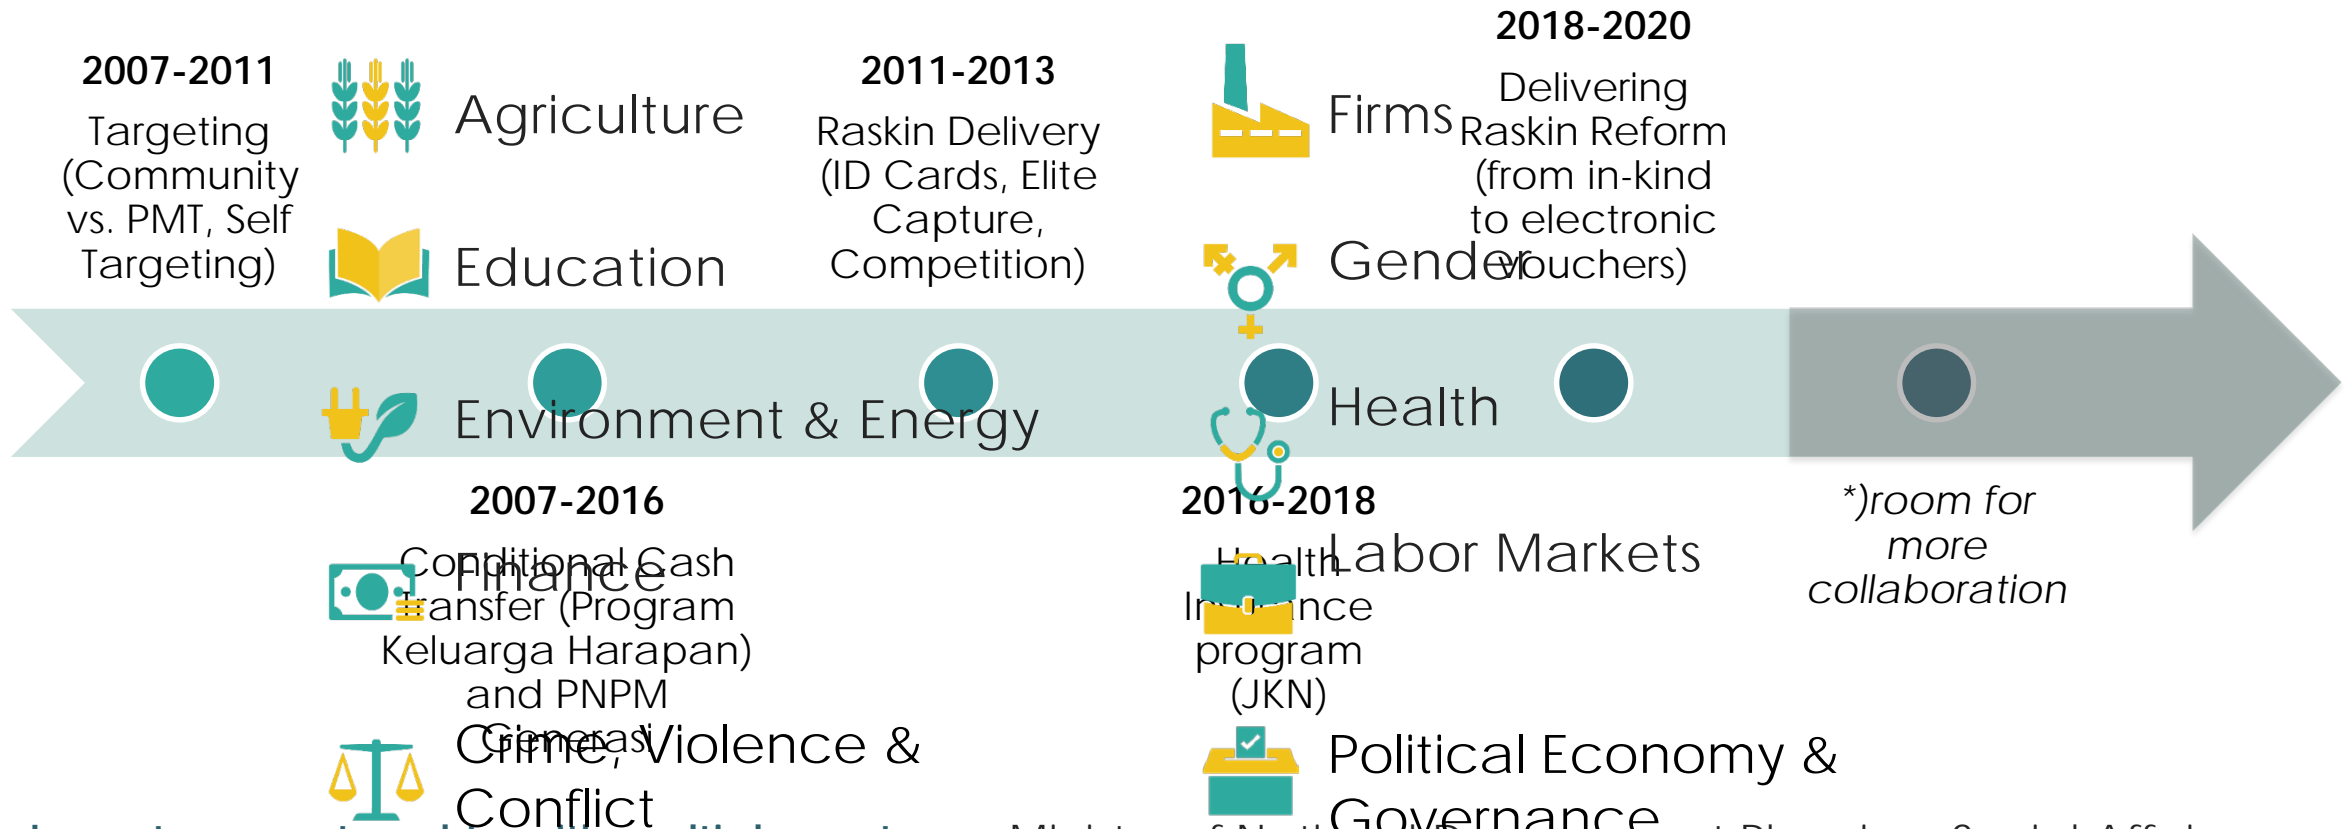

USD 55.62–117.38 million

annually in reduced leakage and increased transfers in 2013–2017.

[Banerjee et al, 2018](#)

Our other collaboration with policymakers and partners over the years

Our Work in the 10 Primary Sectors

Long-term partnership with multiple partners: Ministry of National Development Planning, Social Affairs, Home Affairs, Central Bureau of Statistics (BPS), National Team for Acceleration of Poverty Reduction (TNP2K), and Social Security for Health (BPJS Kesehatan)

Thank you.
